Education

Bellevue College – BS in Computer Science – 3.6 GPA — September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Associate Full Stack Developer, Forge Tek Studios – Remote — August 2025 – Current

- Architected a modular React frontend with an Azure-based serverless backend, leveraging custom hooks and context for efficient state management.
- Implemented dynamic data fetching and caching strategies for third-party APIs like Steam and Fab Marketplace to reduce latency.
- Reduced system load and data ingestion overhead by 80% through optimization of client-side rendering and synchronization logic.

Full Stack Developer Intern, METY Technology – Remote — September 2024 – June 2025

- Integrated real-time machine learning models (MoveNet) with React to enable low-latency, gesture-based user interaction directly in the browser.
- Architected a secure backend using Express.js and Node.js with a robust state management layer using Redux Toolkit.
- Automated testing and deployment processes via a custom CI/CD pipeline on Azure App Service, ensuring consistent delivery and quality standards.

Open-Source Intern, CodeDay – Seattle, WA — April 2025 – May 2025

- Orchestrated Docker-based development environments to ensure consistent application behavior across local and staging stages.
- Authored comprehensive database integration tests to resolve high-priority open-source tickets and prevent regression.
- Drove project velocity as Scrum Master, meeting all client deadlines through proactive blocker removal and communication.

Projects

Stock Ratio Tracker - Python, React, Typescript — github.com

- Built a Python-based data ingestion and transformation layer to feed live financial metrics into a React-based frontend.
- Optimized real-time data streaming and state synchronization between Python processes and Perspective visualization components.
- Reduced data visualization latency for trading metrics through the use of high-performance streaming libraries.

Traffic Violation Detection System - Javascript, Azure Cloud Services — github.com

- Architected an event-driven serverless pipeline on Azure, integrating Computer Vision for image analysis and Queue Storage for decoupled message processing.
- Implemented pattern matching with Regex to filter geographic plate data, ensuring accurate routing and notice generation.
- Automated the violation detection and notification workflow, reducing manual processing time by over 90%.

Skills

Languages: Python, Java, JavaScript, TypeScript, Go, SQL, HTML/CSS
Skills: Cloud-Native Development, Azure Services, Serverless Architecture, Full-stack, RESTful APIs, Agile/Scrum, CI/CD
Tools: Azure (Blob Storage, Queue Storage, Event Grid, Computer Vision, Functions), React, Redux Toolkit, Node.js, Docker, Git, Jira
