Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Architected a modular React frontend following SOLID principles with custom hooks and context, achieving 45% reduction in component re-renders and improving maintainability.
- Implemented intelligent caching for external APIs, cutting API calls by 60% through request deduplication and 5-minute TTL caching to optimize data ingestion.
- Built a serverless backend endpoint with input validation, email templating, and reliable delivery without managing infrastructure overhead.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Integrated real-time MoveNet ML models with React, processing 30 FPS live camera streams with under 50ms latency for gesture recognition.
- Architected secure Express.js and Node.js backend with Redux Toolkit state management, supporting 200+ concurrent users with encrypted API endpoints.
- Automated testing with Jest achieving 85% code coverage and deployed via AWS Amplify CI/CD, reducing manual testing time by 60%.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Built Docker-based development environments and automated testing containers to ensure consistent application behavior across local, staging, and production stages.
- Implemented database integration tests and submitted 2 merge requests adhering to CI/CD pipeline standards, achieving 100% code review approval.
- Led 3-person team as Scrum Master across 2-week sprints, resolving 2 open-source tickets through daily stand-ups and 100% on-time sprint delivery.

Projects

Read MNIST Handwritten Dataset - Python, Numpy Library github.com

- Engineered a multi-layer perceptron architecture from mathematical foundations, implementing forward and backward propagation without high-level ML libraries.
- Optimized matrix operations using NumPy vectorization to reduce training time and improve computational efficiency.
- Achieved over 90% accuracy using the Backpropagation algorithm, demonstrating deep understanding of machine learning fundamentals.

Traffic Violation Detection System - Javascript, AWS Cloud Services github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Implemented pattern matching with Regex to filter geographic plate data, ensuring accurate routing and notice generation through EventBridge and SES.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, C++

Skills: Machine Learning, Deep Learning, RESTful APIs, Full-stack Development, SOLID, Clean Code, Agile, Scrum

Tools: AWS Cloud Services, Docker, TensorFlow, NumPy, React, Node.js, Express.js, Git, GitHub Actions, CI/CD
