Experience

- Full Stack Developer Intern**, METY Technology – Remote September 2024 – June 2025
- Integrated real-time MoveNet ML models with React following SOLID principles, processing **30 FPS live camera streams** with <50ms latency for gesture recognition.
 - Architected secure Express.js/Node.js backend with Redux Toolkit state management, supporting **200+ concurrent users** with encrypted API endpoints.
 - Automated testing with Jest (**85% code coverage**) and deployed via AWS Amplify CI/CD, reducing manual testing time by 60% and achieving 90% sprint velocity.

- Associate Full Stack Developer**, Forge Tek Studios – Remote August 2025 – Current
- Architected a modular React frontend following SOLID principles with custom hooks and context, achieving **45% reduction in component re-renders** and improving maintainability.
 - Implemented intelligent caching for Steam and Fab Marketplace APIs, cutting API calls by **60%** through request deduplication and 5-minute TTL caching.
 - Managed the full production release lifecycle, including build pipelines, environment configs, DNS, and hosting to deliver a fully operational site used by real customers.

- Open-Source Intern**, CodeDay – Seattle, WA April 2025 – May 2025
- Built Docker-based development environments and automated testing containers to ensure consistent application behavior across local, staging, and production stages.
 - Implemented database integration tests and submitted 2 MRs adhering to CI/CD pipeline standards, achieving **100% code review approval**.
 - Led 3-person team as Scrum Master across 2-week sprints, resolving 2 OED open-source tickets through daily stand-ups and **100% on-time sprint delivery**.

Projects

- Traffic Violation Detection System** - Javascript, AWS Cloud Services github.com
- Architected an event-driven serverless pipeline on AWS, integrating Rekognition ML models for image analysis and SQS for decoupled message processing.
 - Implemented pattern matching with Regex to filter geographic plate data, ensuring accurate routing and SES-based notice generation.

- Read MNIST Handwritten Dataset** - Python, Numpy Library github.com
- Built an Artificial Neural Network (ANN) from scratch to classify handwritten digits (0-9) using Python and NumPy, implementing forward and backward propagation.
 - Achieved **over 90% accuracy** using the Backpropagation algorithm, demonstrating deep understanding of machine learning fundamentals.

Education

- Bellevue College** – BS in Computer Science – 3.6 GPA September 2021 – June 2025
- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, C++

Skills: Machine Learning, AI/LLMs, Scientific Computing, RESTful APIs, Full-stack Development, CI/CD, SOLID Principles, Agile, Scrum

Tools: Docker, Git, GitHub Actions, AWS Cloud Services, TensorFlow.js, Jest, Linux
