Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Built automated data ingestion and caching pipelines processing data from 3 external APIs, transforming raw API responses into structured content for **5,000+ daily users** with 99.9% uptime.
- Designed and maintained automated deployment pipelines with GitHub Actions, implementing production monitoring and alerting for continuous delivery.
- Reduced data processing overhead by **80%** through optimized server-side caching and batch transformation workflows.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Built and maintained automated CI/CD pipelines using AWS Amplify, integrating code quality gates and automated testing (**85% coverage**) for reliable deployments.
- Developed RESTful APIs and data processing endpoints handling **200+ concurrent users**, focusing on throughput, reliability, and structured data management.
- Worked with structured datasets and SQL-like queries to support real-time application state and user session management.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Containerized development and testing environments with Docker, implementing automated database integration tests in CI/CD pipelines.
- Reduced environment-related failures by **25%** and setup time by **40%** through standardized containerized workflows and automated validation.

Projects

Resume Automation MCP - LaTeX, YAML, GitHub Actions, Python github.com

- Developed an automated pipeline that generates tailored documents from a versioned YAML data store using LLM-driven content selection and processing.
- Engineered a CI/CD workflow using GitHub Actions to compile LaTeX source into production-ready PDFs upon every push.
- Created a modular data-injection system that dynamically pivots content to match specific role requirements.

Traffic Violation Detection System - JavaScript, AWS (Rekognition, S3, SQS, EventBridge, SES) github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Automated the violation detection and notification workflow, reducing manual processing time by over **90%** using fully serverless architecture.
- Implemented data transformation and routing with regex-based geographic filtering through EventBridge.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: Python, JavaScript, TypeScript, Java, SQL, LaTeX

Skills: Automation Pipelines, CI/CD, RESTful APIs, Containerization (Docker), Cloud Infrastructure (AWS), Data Processing & Transformation, Systems Administration, OOP, SOLID Principles

Tools: Git, GitHub Actions, Node.js, Express.js, Jest, Docker, AWS (Amplify, S3, SQS, EventBridge, SES, Rekognition), TensorFlow.js
