Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Owned the end-to-end development and deployment lifecycle of a production TypeScript React application serving **5,000+ MAU**, ensuring 99.9% uptime through automated CI/CD pipelines.
- Optimized API ingestion and server-side caching, reducing data processing overhead by **80%** and lowering page load times from 3.2s to 0.8s across 10+ product pages.
- Architected a modular React frontend following SOLID principles with custom hooks and context, achieving **45% reduction** in component re-renders and improving maintainability.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Integrated real-time MoveNet ML models with React using TensorFlow.js, processing 30 FPS live camera streams with **<50ms latency** for responsive gesture recognition.
- Architected secure Express.js/Node.js backend with Redux Toolkit state management, supporting **200+ concurrent users** with encrypted API endpoints.
- Built and maintained a CI/CD pipeline via AWS Amplify with automated Jest testing (**85% coverage**) and ESLint code quality enforcement.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Built Docker-based development environments and automated testing containers, reducing environment-related bugs by **25%** and setup time by **40%**.
- Implemented database integration tests and submitted 2 MRs adhering to CI/CD pipeline standards, achieving **100% code review approval**.

Projects

Resume Automation MCP - LaTeX, YAML, GitHub Actions, LLM github.com

- Architected a document generation system using LaTeX and YAML, implementing strict separation of concerns between data storage and rendering.
- Configured GitHub Actions workflows to automate LaTeX compilation and artifact management, ensuring consistent, environment-independent builds.
- Developed an LLM-driven content selection pipeline that dynamically tailors resume content to match specific role requirements.

Traffic Violation Detection System - JavaScript, AWS Rekognition, S3, SQS, EventBridge, SES github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Implemented Regex-based geographic filtering to route events through EventBridge and trigger SES-based automated email notifications.
- Automated the violation detection workflow, reducing manual processing time by over **90%** using fully serverless architecture.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: Python, JavaScript, TypeScript, Java, SQL

Skills: RESTful APIs, CI/CD, Containerization (Docker), Cloud Infrastructure (AWS), Data Structures & Algorithms, OOP, SOLID Principles, Agile/Scrum

Tools: Git, GitHub Actions, Node.js, Express.js, Jest, AWS (Amplify, S3, SQS, EventBridge, SES, Rekognition), TensorFlow.js, Redux Toolkit
