Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current
• Built and deployed a production-ready full-stack component-driven React application, integrating external APIs (Steam, Fab Marketplace) to dynamically render real-time content.
• Optimized client-side rendering and data synchronization, reducing load and ingestion overhead by 80%—focusing on performance-sensitive UI updates.
• Managed the full production release lifecycle, including build pipelines, environment configs, DNS, and hosting to deliver a fully operational site used by real customers.
• Designed and deployed a serverless backend to keep costs low and servers flexible for high visitor traffic.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Engineered a real-time, interaction-driven application using React and TensorFlow.js (MoveNet), processing live camera input and rendering responsive UI feedback.
• Developed secure and scalable RESTful APIs with Express.js and Node.js to manage data flow and backend communication, in frontend, used Tailwind CSS for styling and Redux Toolkits for state managing.
• Built and maintained a CI/CD pipeline using AWS Amplify, with automated testing via Jest and code quality enforcement through ESLint.

Coding Competition Developer, Bellevue College – Bellevue, WA April 2024 – May 2025
• Developed real-time score updates using SQL and PHP, increasing efficiency by 40%.
• Created coding problems with auto test cases for Java, Python, C++, and Golang.
• Assisted onsite at a competition with 30+ participants to ensure smooth operations.

Projects

Stock Ratio Tracker - Python, React, Typescript github.com
• Architected the data-flow pipeline connecting Python backend calculations to a live React dashboard, ensuring stable, low-latency ratio updates.
• Used JPMorgan Chase's open-source library called Perspective to generate a live graph that displays a data feed in a clear and visually appealing way for traders to monitor.
• Implemented automated unit tests to ensure correctness and reliability.

Read MNIST Handwritten Dataset - Python, Numpy Library github.com
• Built an Artificial Neural Network (ANN) from scratch to classify handwritten digits (0-9) using Python and NumPy.
• Achieved over 90% accuracy using the Backpropagation algorithm, demonstrating deep understanding of machine learning fundamentals.

Skills

Languages: Python, SQL (MySQL, PostgreSQL), Java, C++, TypeScript, JavaScript, Go, PHP, HTML/CSS

Skills: Data Engineering Fundamentals, APIs and Data Flow, AI and Generative AI, Full-stack, SQL

Tools: Spark/PySpark (Familiar), NumPy, TensorFlow.js, React, Redux Toolkit, AWS Cloud Services, Docker, Git
