Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Sales Specialist, Verizon – Covington, WA November 2025 – Current

- De-escalated complex technical issues by explaining bandwidth optimization, signal propagation, and network topology to non-technical customers.
- Conducted hardware diagnostics and firmware validation on mobile devices and networking equipment to ensure optimal performance.
- Streamlined inventory workflows and device diagnostic processes, reducing customer wait times and improving store operational efficiency.

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Present

- Architected a modular React frontend with a serverless backend, leveraging custom hooks and context for efficient state management.
- Implemented dynamic data fetching and caching strategies for third-party APIs like Steam and Fab Marketplace to reduce latency.
- Managed the full production release lifecycle, including build pipelines, environment configs, DNS, and hosting to deliver a fully operational site used by real customers.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Integrated real-time machine learning models (MoveNet) with React to enable low-latency, gesture-based user interaction directly in the browser.
- Architected a secure backend using Express.js and Node.js with a robust state management layer using Redux Toolkit.
- Automated testing and deployment processes via a custom CI/CD pipeline on AWS Amplify, ensuring consistent delivery and quality standards.

Projects

Network-Wide Ad Blocker (Pi-hole) - Linux, Shell Scripting, DNS github.com

- Engineered a custom network-layer security solution using Linux and Pi-hole to filter DNS traffic across all connected devices.
- Diagnosed and resolved network routing conflicts to ensure zero-latency ad blocking.
- Verified system behavior through log inspection, connectivity testing, and iterative configuration changes to ensure stable and reliable operation.

Traffic Violation Detection System - Javascript, AWS Cloud Services github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Implemented pattern matching with Regex to filter geographic plate data, ensuring accurate routing and notice generation.
- Automated the violation detection and notification workflow, reducing manual processing time by over 90%.

Skills

Languages: Python, Bash, TypeScript, JavaScript, SQL, HTML, CSS

Skills: Technical Troubleshooting, Networking (TCP/IP, DNS), REST APIs, JSON, CI/CD, Linux Administration

Tools: Docker, Kubernetes, AWS (S3, SQS, Rekognition), Git, Raspberry Pi, React, Node.js
