Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Present
• Architected a modular React frontend with a serverless backend, leveraging custom hooks and context for efficient state management.
• Implemented dynamic data fetching and caching strategies for third-party APIs to reduce latency and improve system responsiveness.
• Managed the full production release lifecycle, ensuring high standards for code quality and performance-sensitive UI updates.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Architected a secure backend using Express.js and Node.js with a robust state management layer using Redux Toolkit to ensure data integrity.
• Built and maintained a CI/CD pipeline using AWS Amplify, with automated testing via Jest and code quality enforcement through ESLint.
• Integrated real-time machine learning models with React to enable low-latency user interaction directly in the browser.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025
• Orchestrated Docker-based development environments to ensure consistent application behavior across local and staging environments.
• Authored comprehensive database integration tests to resolve high-priority open-source tickets and prevent regression in internal systems.
• Facilitated daily stand-ups and retrospectives as Scrum Master, aligning cross-functional teams on technical requirements and project goals.

Projects

Stock Ratio Tracker - Python, React, TypeScript github.com
• Built a Python-based data ingestion and transformation layer to feed live financial metrics into a React frontend, ensuring stable and low-latency updates.
• Optimized real-time data streaming and state synchronization between Python processes and Perspective visualization components for clear data monitoring.

Traffic Violation Detection System - AWS, JavaScript, Rekognition github.com
• Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing to ensure data safety.
• Implemented pattern matching with Regex to filter geographic plate data, ensuring accurate routing and notice generation for automated violation detection.

Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash, Java, C++, HTML, CSS

Skills: Full-stack Development, API Integration, Database Testing, Docker, CI/CD, Agile/Scrum

Tools: React, Node.js, AWS (S3, SQS, Rekognition, Amplify), Redux Toolkit, Git, Jest, ESLint
