Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Built and deployed a production-ready TypeScript React website integrating 3 external APIs, handling **5,000+ monthly active users** with automatic scaling and real-time data rendering.
- Optimized API ingestion and server-side caching, reducing data processing overhead by **80%** and lowering page load times from 3.2s to 0.8s across 10+ product pages.
- Automated CI/CD pipeline with GitHub Actions for daily deployments, registered DNS via Cloudflare, and implemented GA4 tracking across 15+ user behavior events.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Integrated real-time MoveNet ML models with React using TensorFlow.js, processing 30 FPS live camera streams with **<50ms latency** for responsive gesture recognition.
- Architected secure Express.js/Node.js backend with Redux Toolkit state management, supporting **200+ concurrent users** with encrypted API endpoints.
- Built and maintained a CI/CD pipeline via AWS Amplify with automated Jest testing (**85% coverage**) and ESLint code quality enforcement.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Built Docker-based development environments and automated testing containers, reducing environment-related bugs by **25%** and setup time by **40%**.
- Submitted 2 merge requests with database integration tests, achieving **100% code review approval** within 24 hours following CI/CD pipeline standards.

Projects

Resume Automation MCP - LaTeX, YAML, GitHub Actions, LLM github.com

- Architected a document generation system using LaTeX and YAML, implementing strict separation of concerns between data storage and rendering.
- Configured GitHub Actions workflows to automate LaTeX compilation and artifact management, ensuring consistent, environment-independent builds.
- Developed an **LLM-driven content selection** pipeline that dynamically tailors content to match specific role requirements.

MNIST Handwritten Digit Classifier - Python, NumPy github.com

- Engineered a multi-layer perceptron architecture from mathematical foundations, implementing forward and backward propagation without high-level ML libraries.
- Optimized matrix operations using NumPy vectorization to reduce training time and improve computational efficiency.
- Attained **90%+ classification accuracy** on the standard MNIST benchmark, verifying model correctness.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: Python, JavaScript, TypeScript, Java, SQL

Skills: LLMs & AI Agents, Machine Learning, RESTful APIs, CI/CD, Docker, Data Structures & Algorithms, OOP, Agile/Scrum

Tools: Git, GitHub Actions, TensorFlow.js, NumPy, Node.js, Express.js, Jest, AWS (Amplify, Rekognition, S3, SQS, EventBridge)
