Experience

- Associate Software Engineer**, Forge Tek Studios – Remote August 2025 – Current
- Architected a modular React frontend following SOLID principles with custom hooks and context, achieving **45% reduction in component re-renders** and improving maintainability.
 - Implemented intelligent caching for Steam and Fab Marketplace APIs, cutting API calls by **60%** through request deduplication and 5-minute TTL caching.
 - Built a serverless contact form endpoint using the Resend API with input validation, HTML email templating, and reply-to routing, achieving reliable email delivery without managing SMTP infrastructure.
- Software Engineer Intern**, METY Technology – Remote September 2024 – June 2025
- Integrated real-time MoveNet ML models with React using TensorFlow.js, processing 30 FPS live camera streams with **<50ms latency** for gesture recognition.
 - Architected secure Express.js/Node.js backend with Redux Toolkit state management, supporting **200+ concurrent users** with encrypted API endpoints.
 - Built a CI/CD pipeline via AWS Amplify with automated testing (Jest, 85% coverage) and code quality enforcement through ESLint.
- Open-Source Intern**, CodeDay – Seattle, WA April 2025 – May 2025
- Built Docker-based development environments and automated testing containers to ensure consistent application behavior across local, staging, and production stages.
 - Implemented database integration tests and submitted 2 MRs adhering to CI/CD pipeline standards, achieving 100% code review approval.
 - Led 3-person team as Scrum Master across 2-week sprints, resolving 2 OED open-source tickets through daily stand-ups and 100% on-time sprint delivery.

Projects

- Stock Ratio Tracker** - Python, React, TypeScript github.com
- Built a Python-based data ingestion and transformation layer to feed live financial metrics into a React-based frontend.
 - Integrated JPMorgan Chase's Perspective library to generate live, interactive graphs for real-time trader monitoring.
 - Implemented automated unit tests to ensure correctness and reliability of ratio calculations.
- Traffic Violation Detection System** - JavaScript, AWS Cloud Services github.com
- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
 - Implemented Regex pattern matching to filter geographic plate data, routing events through SQS and EventBridge to trigger SES-based email notices.
 - Automated the violation detection and notification workflow, reducing manual processing time by over 90%.

Education

- Bellevue College** – BS in Computer Science – 3.6 GPA September 2021 – June 2025
- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: JavaScript, TypeScript, Python, Java, C++, SQL

Skills: Full-stack Development, RESTful APIs, CI/CD, Automated Testing, Data Structures, Git, Agile/Scrum, Code Review, Documentation

Tools: React, Node.js, Express.js, Docker, GitHub Actions, AWS Cloud Services, Redux Toolkit, TensorFlow.js, Tailwind CSS
