Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Integrated real-time machine learning models (MoveNet) with React to enable low-latency, gesture-based user interaction directly in the browser.
• Architected a secure backend using Express.js and Node.js with a robust state management layer using Redux Toolkit to manage complex data flow.
• Automated testing and deployment processes via a custom CI/CD pipeline on AWS Amplify, ensuring consistent delivery and quality standards.

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Present
• Optimized client-side rendering and data synchronization, reducing load and ingestion overhead by 80% through optimization of synchronization logic.
• Delivered a production-ready application that handled high traffic volumes with minimal infrastructure costs using serverless technologies.
• Collaborated on design and architecture decisions, advocating for scalable solutions to meet performance and user experience requirements.

Sales Specialist, Verizon – Covington, WA November 2025 – Present
• De-escalated complex technical issues by explaining bandwidth optimization and network topology to non-technical customers, improving customer satisfaction.
• Consistently surpassed monthly sales quotas by achieving 130% of targets through technical product expertise and consultative solution-selling.
• Streamlined inventory workflows and device diagnostic processes, reducing customer wait times and improving operational efficiency.

Projects

MNIST Handwritten Digit Classifier - Python, NumPy github.com
• Engineered a multi-layer perceptron architecture from mathematical foundations, implementing backpropagation without high-level ML libraries.
• Attained 90%+ classification accuracy on standard MNIST benchmark, verifying model correctness and algorithm efficiency.

Traffic Violation Detection System - JavaScript, AWS Cloud Services github.com
• Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
• Automated the violation detection and notification workflow, reducing manual processing time by over 90%.

Skills

Languages: Python, SQL, JavaScript, TypeScript, Java, PHP, Go, C++ , HTML/CSS

Skills: Machine Learning, AI-driven Solutions, Data Analysis, Root Cause Analysis, API Integration, Serverless Architecture, CI/CD, Customer Experience

Tools: NumPy, TensorFlow.js, AWS (Rekognition, S3, SQS), React, Node.js, Redux Toolkit, Git, CRM
