Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Sales Specialist, Verizon – Covington, WA November 2025 – Current
• Consistently surpassed monthly sales quotas by achieving 130% of targets through technical product expertise and consultative solution-selling.
• De-escalated complex technical issues by explaining bandwidth optimization, signal propagation, and network topology to non-technical customers.
• Contributed to regional sales targets by translating technical specifications into business value for diverse customer segments.

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current
• Built and deployed a production-ready full-stack component-driven React application, integrating external APIs (Steam, Fab Marketplace) to dynamically render real-time content.
• Implemented dynamic data fetching and caching strategies for third-party APIs like Steam and Fab Marketplace to reduce latency.
• Reduced system load and data ingestion overhead by 80% through optimization of client-side rendering and synchronization logic.
• Owned the end-to-end development and deployment lifecycle of a full-stack project, ensuring high standards for code quality and performance.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Architected a secure backend using Express.js and Node.js with a robust state management layer using Redux Toolkit.
• Integrated real-time machine learning models (MoveNet) with React to enable low-latency, gesture-based user interaction directly in the browser.
• Automated testing and deployment processes via a custom CI/CD pipeline on AWS Amplify, ensuring consistent delivery and quality standards.

Projects

Stock Ratio Tracker - Python, React, Typescript [github.com](#)
• Architected the data-flow pipeline connecting Python backend calculations to a live React dashboard, ensuring stable, low-latency ratio updates.
• Used JPMorgan Chase's open-source library Perspective to generate a live, interactive graph for trader monitoring of real-time financial metrics.
• Implemented automated unit tests to ensure correctness and reliability of ratio calculations.

Network-Wide Ad Blocker (Pi-hole) - Shell Scripting, Linux, DNS [github.com](#)
• Engineered a custom network-layer security solution using Linux and Pi-hole to filter DNS traffic across all connected devices.
• Configured DNS services and network routing from scratch, diagnosing and resolving conflicts to ensure stable, zero-latency ad blocking.
• Enhanced network-wide security and reduced bandwidth consumption by filtering malicious and tracking-heavy domains.

Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, Shell Scripting, HTML/CSS

Skills: OAuth2, SAML, LDAP, DNS, RESTful APIs, Full-stack, Security (SSL/TLS, XSS), Whiteboarding

Tools: AWS, React, Node.js, Express, MCP, Docker, Git, Linux, Raspberry Pi, Jira
