Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current
• Architected a modular React frontend with a serverless backend, leveraging custom hooks and context for efficient state management.
• Reduced system load and data ingestion overhead by 80% through optimization of client-side rendering and synchronization logic.
• Designed and deployed a serverless backend to keep costs low and servers flexible for high visitor traffic.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Integrated real-time machine learning models (MoveNet) with React to enable low-latency, gesture-based user interaction directly in the browser.
• Architected a secure backend using Express.js and Node.js with a robust state management layer using Redux Toolkit.
• Automated testing and deployment processes via a custom CI/CD pipeline on AWS Amplify, ensuring consistent delivery and quality standards.

Teaching Assistant, Bellevue College – Bellevue, WA April 2024 – December 2024
• Provided in-depth technical coaching on relational schema design, query optimization, and Java unit testing patterns.
• Improved student success rates by 20% through targeted feedback and supplemental instruction in Java best practices.
• Mentored students on software engineering principles like documentation (Javadoc) and testing (JUnit) as foundational career skills.

Projects

Stock Ratio Tracker - Python, React, Typescript github.com
• Built a Python-based data ingestion and transformation layer to feed live financial metrics into a React-based frontend.
• Optimized real-time data streaming and state synchronization between Python processes and Perspective visualization components.
• Increased trader decision-making efficiency by 40% through intuitive, real-time dashboard design.

Reverse-Polish Calculator - Java, ANTLR, JUnit, OOP Concepts github.com
• Designed and implemented a grammar-driven parser using ANTLR and the Visitor pattern for abstract syntax tree traversal.
• Engineered stack-based evaluation logic to handle complex nested reverse-polish notation expressions.
• Implemented automated unit tests to ensure correctness and reliability of expression evaluation.

Skills

Languages: Java, C++, Python, TypeScript, Go, JavaScript, SQL, MySQL, Tailwind CSS

Skills: Algorithms & Data Structures, RESTful APIs, SOLID, Clean Code, JUnit, Javadoc, Perspective

Tools: React, Node.js, Serverless, Docker, GitHub Actions, AWS, ANTLR, TensorFlow.js, Redux Toolkit
