Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Sales Specialist, Verizon – Covington, WA November 2025 – Current
• Consistently surpassed monthly sales quotas by achieving 130% of targets through technical product expertise and consultative solution-selling.
• De-escalated complex technical issues by explaining bandwidth optimization, signal propagation, and network topology to non-technical customers and business partners.
• Identified and initiated partnerships with local business clients, serving as their primary technical point of contact and building long-term trust for complex service offerings.

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Present
• Managed the full production release lifecycle, including build pipelines, environment configs, DNS, and hosting to deliver a fully operational site for high visitor traffic.
• Architected a modular React frontend with a serverless backend, optimizing client-side rendering and data synchronization to reduce ingestion overhead by 80%.
• Collaborated on design and architecture decisions, advocating for scalable solutions to meet demanding customer specifications and performance requirements.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Integrated real-time machine learning models (MoveNet) with React to enable low-latency, gesture-based user interaction directly in the browser.
• Built and maintained a CI/CD pipeline using AWS Amplify, with automated testing via Jest and code quality enforcement through ESLint to ensure production stability.
• Developed secure and scalable RESTful APIs to manage data flow and backend communication for interaction-driven applications.

Projects

Traffic Violation Detection System - AWS, Rekognition, JavaScript github.com
• Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and vision-based license plate identification.
• Automated the violation detection and notification workflow, reducing manual processing time by over 90% and leveraging SQS for decoupled message processing.

Network-Wide Ad Blocker (Pi-hole) - Linux, DNS, Shell Scripting github.com
• Engineered a custom network-layer security solution using Linux and Pi-hole to filter DNS traffic across all connected devices.
• Verified system behavior through log inspection, connectivity testing, and iterative configuration changes to ensure stable and reliable operation in home-lab environments.

Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash, HTML, CSS, Java, C++

Skills: Technical Troubleshooting, Consultative Selling, Customer Relationship Management, System Architecture

Tools: AWS Cloud Services (Rekognition, S3, SQS), Linux, Docker, React, Node.js, Serverless, Git, CRM
