Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current
• Architected a modular React frontend with a serverless backend, leveraging custom hooks and context for efficient state management and high-performance UI updates.
• Optimized client-side rendering and data synchronization, reducing load and ingestion overhead by 80%—focusing on performance-sensitive data feeds.
• Implemented dynamic data fetching and caching strategies for third-party APIs (Steam, Fab Marketplace) to reduce latency and improve reliability.
• Managed the full production release lifecycle, including build pipelines, environment configs, DNS, and hosting to deliver a fully operational site.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Integrated real-time machine learning models (MoveNet/TensorFlow.js) with React to enable low-latency, gesture-based user interaction directly in the browser.
• Developed secure and scalable RESTful APIs with Express.js and Node.js to manage data flow and backend communication for high-concurrency interaction.
• Automated testing and deployment processes via a custom CI/CD pipeline on AWS Amplify, ensuring consistent delivery and quality standards through Jest.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025
• Orchestrated Docker-based development environments to ensure consistent application behavior across local and staging stages, simplifying onboarding and deployment.
• Resolved high-priority OED tickets in an Agile environment through the implementation of comprehensive database integration tests and regression fixes.
• Drove project velocity as Scrum Master, meeting all client deadlines through proactive blocker removal and cross-functional coordination.

Projects

Read MNIST Handwritten Dataset - Python, NumPy github.com
• Engineered a multi-layer perceptron architecture from mathematical foundations using Python and NumPy, implementing forward and backward propagation without high-level ML libraries.
• Optimized matrix operations using NumPy vectorization to reduce training time and improve computational efficiency for deep learning tasks.
• Achieved over 90% accuracy on the test dataset, verifying model correctness and deep understanding of machine learning fundamentals.

Traffic Violation Detection System - JavaScript, AWS Cloud Services github.com
• Processed license plate images from S3 using AWS Rekognition, automating the identification of traffic offenders through serverless integration.
• Engineered an event-driven architecture using SQS and EventBridge to route identification events and trigger SES-based email notices for automated reporting.
• Integrated multiple AWS services to build a production-grade monitoring system focused on scalability and operational reliability.

Skills

Languages: Python, Go, TypeScript, Java, SQL, C++, HTML/CSS, JavaScript, Node.js

Skills: RESTful APIs, ML Fundamentals, Event-Driven Architecture, Full-stack, SOLID, Agile/Scrum

Tools: Docker, Kubernetes, AWS (Rekognition, SQS, S3, EventBridge), React, TensorFlow.js, CI/CD (GitHub Actions, AWS Amplify), Git, Jira
