Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Sales Specialist, Verizon – Covington, WA November 2025 – Current

- De-escalated complex technical issues by explaining network topology, bandwidth optimization, and signal propagation to non-technical customers to drive sales.
- Consistently surpassed monthly sales quotas by achieving 130% of targets through technical product expertise and consultative solution-selling.
- Conducted hardware diagnostics and firmware validation on mobile devices and networking equipment to ensure optimal performance and security readiness.

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Delivered a production-ready application that handled high traffic volumes with minimal infrastructure costs using serverless technologies on cloud platforms.
- Architected a modular React frontend with a serverless backend, leveraging custom hooks and context for efficient state management and data integrity.
- Owned the end-to-end development and deployment lifecycle, ensuring high standards for code quality, performance, and application security.

Teaching Assistant, Bellevue College – Bellevue, WA April 2024 – December 2024

- Provided in-depth technical coaching on relational schema design, query optimization, and Java unit testing patterns to a classroom of 40+ students.
- Managed group labs and office hours, adapting technical communication styles to explain complex CS concepts to diverse audiences.
- Mentored students on software engineering principles like documentation and testing as foundational security and stability practices.

Projects

Automated Document Generation Pipeline - Python, YAML, GitHub Actions github.com

- Architected an automated pipeline using Python and YAML to dynamically tailor technical documentation based on targeted requirement analysis.
- Configured CI/CD workflows with GitHub Actions to automate build processes and artifact management, ensuring consistent, environment-independent deployments.
- Integrated LLM-driven logic to perform feature extraction and content mapping, reducing manual tailoring time by 90%.

Traffic Violation Detection System - AWS, JavaScript, Event-Driven Architecture github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled, resilient message processing.
- Implemented pattern matching with Regex to filter and route geographic data, triggering automated SES-based notification workflows.
- Leveraged S3, EventBridge, and Lambda to build a scalable, cost-efficient solution for real-time data ingestion and processing.

Skills

Languages: Python, JavaScript, Java, SQL, PowerShell, Bash, TypeScript, LaTeX, YAML, HTML/CSS

Skills: Pre-sales Engineering, Technical Troubleshooting, Cloud Architecture (AWS), CI/CD, Consulting, RESTful APIs

Tools: Windows/macOS/Linux, GitHub Actions, Docker, React, Node.js, CRM, AWS Rekognition, SQS, EventBridge
