Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025
• Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Experience

Sales Specialist, Verizon – Covington, WA November 2025 – Current
• De-escalated complex technical issues by explaining bandwidth optimization, signal propagation, and network topology to non-technical customers to drive informed decision-making.
• Consistently surpassed monthly sales quotas by achieving 130% of targets through technical product expertise and consultative solution-selling.
• Developed ongoing relationships with strategic business partners by identifying their long-term growth potential and tailoring technical solutions to their specific needs.

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current
• Architected a modular React frontend with a serverless backend, leveraging custom hooks and context for efficient state management and dynamic data fetching.
• Implemented dynamic data fetching and caching strategies for third-party APIs to reduce latency and improve system responsiveness for high visitor traffic.
• Managed the end-to-end development and deployment lifecycle, ensuring high standards for code quality and performance in a production environment.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025
• Integrated real-time machine learning models (MoveNet) with React using TensorFlow.js to enable low-latency, gesture-based user interaction directly in the browser.
• Developed secure and scalable RESTful APIs with Express.js and Node.js to manage data flow and backend communication for interaction-driven applications.
• Built and maintained a CI/CD pipeline using AWS Amplify, with automated testing via Jest to ensure consistent delivery and quality standards.

Projects

MNIST Handwritten Digit Classifier - Python, NumPy github.com
• Engineered a multi-layer perceptron architecture from scratch, implementing forward and backward propagation using NumPy vectorization for high computational efficiency.
• Attained 90%+ classification accuracy on the standard MNIST benchmark, demonstrating a deep understanding of mathematical machine learning foundations.

Traffic Violation Detection System - JavaScript, AWS Rekognition, S3, SQS github.com
• Architected an event-driven serverless pipeline on AWS, integrating Rekognition for automated image analysis and SQS for decoupled message processing.
• Automated the violation detection and notification workflow, reducing manual processing time by over 90% through efficient cloud resource management.

Skills

Languages: Python, C++ , Java, JavaScript, TypeScript, SQL, HTML, CSS

Skills: Machine Learning (TensorFlow.js, NumPy), Data Pipelines, RESTful APIs, Technical Pre-sales, Embedded ML Concepts

Tools: AWS (Rekognition, S3, SQS, Amplify), React, Node.js, Git, Docker, Linux, CI/CD
