Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Owned the end-to-end development and deployment lifecycle of a full-stack project, ensuring high standards for code quality and performance.
- Built and deployed a production-ready React web application integrating Steam and Fab Marketplace REST APIs, handling 5,000+ monthly active users and real-time data feeds.
- Optimized API ingestion and server-side caching, reducing data processing overhead by 80% and API request latency to 0.8s across multiple integration endpoints.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Facilitated daily stand-ups and sprint retrospectives as Scrum Master, keeping a 3-person team aligned on OED project goals and achieving 100% on-time sprint delivery.
- Implemented database integration tests and validated SQL schemas, resolving OED tickets with code reviewed and merged within 24 hours under Git guidelines.
- Containerized development and testing workflows using Docker, reducing environment conflicts by 25% and cutting onboarding configuration time by 40%.

Account Representative, Verizon – Covington, WA November 2025 – April 2026

- Used CRM sales data and diagnostics to profile SMB accounts, aligning hardware and service recommendations with customer technical requirements.
- Started and nurtured SMB relationships through 70+ cold calls and targeted emails weekly, building pipeline trust and improving conversion quality.
- Applied technical knowledge of bandwidth, devices, and connectivity to propose custom business solutions that minimized downtime and supported long-term growth.

Projects

Stock Ratio Tracker - Python, React, Typescript github.com

- Architected the data-flow pipeline connecting Python backend calculations to a live React dashboard, ensuring stable, low-latency ratio updates.
- Used JPMorgan Chase's open-source library called Perspective to visualize streaming data feeds in a clear, interactive dashboard for traders to monitor.
- Implemented automated unit tests to ensure ratio calculation correctness and data integrity.

Traffic Violation Detection System - Javascript, AWS Cloud Services github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS queues for decoupled message processing.
- Automated the violation detection and notification workflow, routing JSON payloads through EventBridge and SQS to trigger SES email alerts, reducing manual overhead by over 90%.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS, Bash

Skills: Client-Facing Consulting, Technical Account Management, RESTful APIs, JSON, Agile/Scrum, Scrum Master, Project Timelines, Data Analysis

Tools: AWS Cloud Services (S3, SQS, EventBridge, SES), React, Node.js, Vercel, Cloudflare, Docker, Git, CRM, Jira
