Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Built and deployed a production-ready TypeScript React website integrating 3 external APIs, handling **5,000+ MAU** with automated CI/CD pipelines ensuring 99.9% uptime.
- Optimized API ingestion and server-side caching, reducing data processing overhead by **80%** and lowering page load times from 3.2s to 0.8s across 10+ product pages.
- Automated deployment pipeline with GitHub Actions for daily releases, implementing reliable delivery workflows and production monitoring.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Architected secure Express.js/Node.js backend supporting **200+ concurrent users** with encrypted API endpoints and structured state management.
- Built and maintained a CI/CD pipeline using AWS Amplify with automated Jest testing (**85% coverage**) and ESLint code quality enforcement.
- Integrated real-time ML models with React, processing live camera streams with **<50ms latency** for responsive interaction.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Built Docker-based development environments and automated testing containers, reducing environment-related bugs by **25%** and setup time by **40%**.
- Implemented database integration tests and submitted 2 MRs adhering to CI/CD pipeline standards, achieving **100% code review approval**.

Projects

Resume Automation MCP - LaTeX, YAML, GitHub Actions, Python github.com

- Developed an automated pipeline that generates tailored documents from a versioned YAML data store using LLM-driven content selection and processing.
- Engineered a CI/CD workflow using GitHub Actions to compile LaTeX source into production-ready PDFs upon every push.
- Created a modular data-injection system that dynamically pivots content to match specific role requirements.

Traffic Violation Detection System - JavaScript, AWS (Rekognition, S3, SQS, EventBridge, SES) github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Automated the violation detection and notification workflow, reducing manual processing time by over **90%** using fully serverless architecture.
- Implemented data transformation and routing with regex-based geographic filtering through EventBridge.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: Python, JavaScript, TypeScript, Java, SQL, LaTeX

Skills: Automation Pipelines, CI/CD, RESTful APIs, Containerization (Docker), Cloud Infrastructure (AWS), Data Processing & Transformation, Systems Administration, OOP, SOLID Principles

Tools: Git, GitHub Actions, Node.js, Express.js, Jest, Docker, AWS (Amplify, S3, SQS, EventBridge, SES, Rekognition), TensorFlow.js
