Experience

- Associate Full Stack Developer**, Forge Tek Studios – Remote August 2025 – Current
- Architected a modular React frontend following SOLID principles with custom hooks and context, achieving **45% reduction** in component re-renders and improving maintainability.
 - Implemented intelligent caching for Steam and Fab Marketplace APIs, cutting API calls by **60%** through request deduplication and 5-minute TTL caching.
 - Built a serverless contact form endpoint using the Resend API with input validation, HTML email templating, and reply-to routing, achieving reliable email delivery without managing SMTP infrastructure.

- Full Stack Developer Intern**, METY Technology – Remote September 2024 – June 2025
- Integrated real-time MoveNet ML models with React using TensorFlow.js, processing 30 FPS live camera streams with **<50ms latency** for responsive gesture recognition.
 - Architected secure Express.js/Node.js backend with Redux Toolkit state management, supporting **200+ concurrent users** with encrypted API endpoints.
 - Built and maintained a CI/CD pipeline via AWS Amplify with automated Jest testing and ESLint code quality enforcement.

- Open-Source Intern**, CodeDay – Seattle, WA April 2025 – May 2025
- Built Docker-based development environments and automated testing containers, reducing environment-related bugs by **25%** and setup time by **40%**.
 - Implemented database integration tests and submitted 2 MRs adhering to CI/CD pipeline standards, achieving **100% code review approval**.

Projects

- Resume Automation MCP** - LaTeX, YAML, GitHub Actions, LLM github.com
- Architected a document generation system using LaTeX and YAML, implementing a strict separation of concerns between data storage and rendering.
 - Configured GitHub Actions workflows to automate LaTeX compilation and artifact management, ensuring consistent, environment-independent builds.

- Traffic Violation Detection System** - JavaScript, AWS Rekognition, S3, SQS, EventBridge, SES github.com
- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
 - Implemented Regex-based geographic filtering to route events through EventBridge and trigger SES-based automated email notifications.
 - Automated the violation detection workflow, reducing manual processing time by over **90%** using fully serverless architecture.

Education

- Bellevue College** – BS in Computer Science – 3.6 GPA September 2021 – June 2025
- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS3

Skills: React, RESTful APIs, Redux Toolkit, Node.js, Express.js, SOLID Principles, Data Structures & Algorithms, OOP, Agile/Scrum, CI/CD, Docker

Tools: Git, GitHub Actions, AWS (Amplify, Rekognition, S3, SQS, EventBridge, SES), TensorFlow.js, Tailwind CSS, Jest, ESLint, Vercel
