## Experience

---

**Associate Full Stack Developer**, Forge Tek Studios – Remote August 2025 – Current

- Built and deployed a production-ready TypeScript React website integrating 3 external APIs, handling **5,000+ monthly active users** with automatic scaling and real-time data rendering.
- Architected a modular React frontend following SOLID principles with custom hooks and context, achieving **45% reduction** in component re-renders.
- Optimized API ingestion and server-side caching, reducing data processing overhead by **80%** and lowering page load times from 3.2s to 0.8s.

**Full Stack Developer Intern**, METY Technology – Remote September 2024 – June 2025

- Developed secure and scalable RESTful APIs with Express.js and Node.js, supporting **200+ concurrent users** with Redux Toolkit state management.
- Automated testing with Jest (**85% code coverage**) and deployed via AWS Amplify CI/CD with ESLint code quality enforcement.
- Integrated real-time MoveNet ML models with React using TensorFlow.js, processing 30 FPS live camera streams with **<50ms latency**.

**Open-Source Intern**, CodeDay – Seattle, WA April 2025 – May 2025

- Resolved **2 open-source tickets** as Scrum Master, meeting all sprint deadlines through agile ceremonies and cross-team coordination.
- Containerized development workflows with Docker, reducing environment-related bugs by **25%** and cutting setup time by **40%**.
- Submitted merge requests with database integration tests, achieving **100% code review approval** following CI/CD pipeline standards.

## Projects

---

**Stock Ratio Tracker** - Python, React, TypeScript [github.com](https://github.com)

- Built a Python-based data ingestion and transformation layer to feed live financial metrics into a React-based frontend.
- Integrated JPMorgan Chase's Perspective library to generate live, interactive graphs for real-time trader monitoring.
- Implemented automated unit tests to ensure correctness and reliability of ratio calculations.

**Traffic Violation Detection System** - JavaScript, AWS Cloud Services [github.com](https://github.com)

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Automated the violation detection workflow, reducing manual processing time by over **90%** using fully serverless architecture.

## Education

---

**Bellevue College** – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

## Skills

---

**Languages:** Python, TypeScript, JavaScript, Go, Java, SQL

**Skills:** RESTful APIs, Full-stack Development, SOLID Principles, CI/CD, Docker, Open Source, Testing, Agile/Scrum

**Tools:** React, Node.js, Express.js, Redux Toolkit, Docker, AWS Cloud Services, GitHub Actions, Jest, Git
