Experience

Associate Full Stack Developer, Forge Tek Studios – Remote August 2025 – Current

- Built and deployed production-ready TypeScript React application integrating 3 external APIs (Steam, Fab Marketplace, Resend), handling **5,000+ MAU** with automatic scaling and real-time data delivery.
- Optimized API ingestion and server-side caching, reducing data processing overhead by **80%** and lowering page load times from 3.2s to 0.8s across 10+ product pages.
- Automated CI/CD pipeline with GitHub Actions for daily deployments, managed DNS via Cloudflare, and implemented structured event tracking across 15+ user behavior events.

Full Stack Developer Intern, METY Technology – Remote September 2024 – June 2025

- Developed secure and scalable RESTful APIs with Express.js and Node.js to manage data flow and backend communication for a medical AI platform.
- Engineered real-time interaction-driven applications using React and TensorFlow.js, processing live camera input with **<50ms latency** and responsive UI feedback.
- Built and maintained a CI/CD pipeline using AWS Amplify with automated testing via Jest (85% coverage) and code quality enforcement through ESLint.

Open-Source Intern, CodeDay – Seattle, WA April 2025 – May 2025

- Containerized development and testing workflows using Docker, reducing environment-related bugs by **25%** and cutting setup time by **40%**.
- Resolved 2 medium-priority tickets by implementing database test cases, with code reviewed and merged within 24 hours through Git MR following pipeline guidelines.

Projects

Resume Automation MCP - LaTeX, YAML, GitHub Actions, LLM github.com

- Developed an automated pipeline that generates tailored resumes and cover letters from a versioned YAML data store using LLM-driven content selection.
- Engineered an automated CI/CD workflow using GitHub Actions to compile LaTeX source into production-ready PDFs upon every push.
- Created a modular data-injection system that dynamically pivots resume content to match specific role requirements.

Traffic Violation Detection System - JavaScript, AWS Rekognition, S3, SQS, EventBridge, SES github.com

- Architected an event-driven serverless pipeline on AWS, integrating Rekognition for image analysis and SQS for decoupled message processing.
- Implemented Regex-based geographic filtering to route events through EventBridge and trigger SES-based automated email notifications.
- Automated the violation detection workflow, reducing manual processing time by over **90%** using fully serverless architecture.

Education

Bellevue College – BS in Computer Science – 3.6 GPA September 2021 – June 2025

- Award: Amazon Scholarship, Activities: Social Media Manager of Computer Science Club

Skills

Languages: TypeScript, JavaScript, Python, Java, Go, PHP, SQL, HTML/CSS

Backend: RESTful APIs, Node.js, Express.js, SQL Databases, API Design, CI/CD, Docker, AWS (Amplify, Rekognition, S3, SQS, EventBridge, SES)

Frontend: React, Redux Toolkit, Tailwind CSS
